

Nursery Pools - Stage 2 of pup rehabilitation

Once the pup is stable and is a healthy weight, we then introduce them to the nursery pools.

The pups in the nursery pools are going through the next stage of rehabilitation, this means they are on the road to recovery and ready to now mix with other seal pups, as well have a deeper pool to swim in.

Pups in the nursery pools will be learning how to behave in the wild, interacting with other seals and also competing for their fish, which are all vital skills they will need when they are released into their ocean home.
